ORIGINAL

Chairman Stump and Commissioners,

My company is a small business in Mesa Arizona that conducts Home Performance with Energy Star home energy audits for both APS & SRP customers. Over the last 3 years we have performed over 300 audits and of those, 52% have completed improvements to their homes with an average energy savings of 28%!

Not only has this reduced the energy demand, it has also generated over \$500,000 in small business revenue & associated taxes, as well as supported many jobs.

The elimination of the current Energy Efficiency standards in Arizona would severely affect our business, causing job losses for our partners and us but more importantly stop the significant reduction in energy demand in the metro Phoenix area.

Arizona is saving energy, creating jobs and saving every ratepayer money with the current program.

Commissioners I respectfully urge you to:

Continue the existing Energy Efficiency Standards for Arizona

Do not add the RIM Test for evaluating the effectiveness of the program

Sincerely,

Kevin Jackson
